

ANGLE Relationships

ADJACENT ANGLES

Two angles that are next to each other and share a common side.

Example:

VERTICAL ANGLES

Two angles across from each other on intersecting lines. They are always congruent!

Example:

$\angle 1 \cong \angle 3$
 $\angle 2 \cong \angle 4$

LINEAR PAIR

Two angles that are adjacent and supplementary. They form a straight line!

Example:

COMPLEMENTARY ANGLES

Any two angles whose sum is 90°

Example:

180 SUPPLEMENTARY ANGLES

Any two angles whose sum is 180°

Example:

S → straight

Identifying Types of Angles: Check all relationships between $\angle 1$ and $\angle 2$.
