

Parallel Lines & Transversals

3.2

If two PARALLEL lines are cut by a transversal. Then

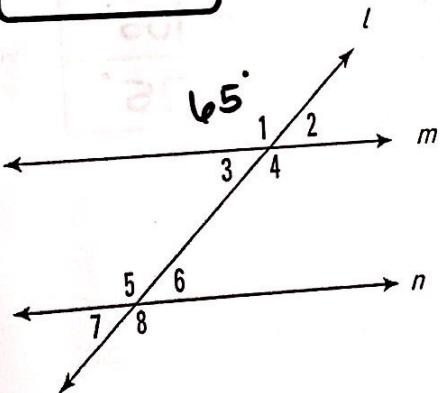

- Each pair of corresponding angles is congruent \cong
- Each pair of alternate interior angles is congruent \cong
- Each pair of alternate exterior angles is congruent \cong
- Each pair of same-side interior angles is supplementary $\angle = 180^\circ$

And recall from Unit 1, vertical angles are always congruent and a linear pair is always supplementary.

{So if we know one angle measure, then we can find them all} For the following examples 1-2, $m \parallel n$.

Given $m\angle 1 = 65^\circ$, find the measure of each missing angle. Give your reasoning.

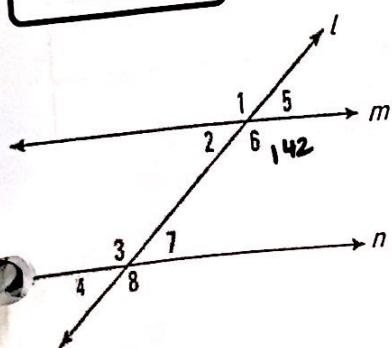

Example 1

$m\angle 2$	115°	linear pair to $\angle 1$
$m\angle 3$	115°	vertical to $\angle 2$
$m\angle 4$	65°	vertical to $\angle 1$
$m\angle 5$	65°	corresp. to $\angle 1$
$m\angle 6$	115°	alt int $\angle 3$
$m\angle 7$	115°	vertical $\angle 6$
$m\angle 8$	65°	vertical $\angle 5$

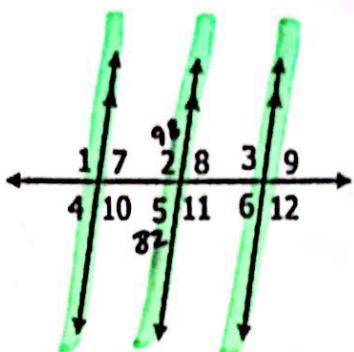

Example 2

Given $m\angle 6 = 142^\circ$, find the measure of each missing angle. Give your reasoning.

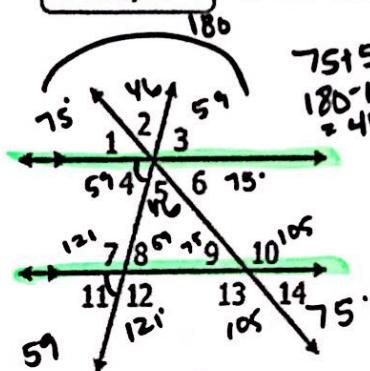

$m\angle 2$	38°	LP (linear pair) to $\angle 6$
$m\angle 3$	142°	vertical $\angle 8$
$m\angle 4$	38°	corresp $\angle 2$
$m\angle 5$	38°	vertical $\angle 2$
$m\angle 1$	142°	vertical to $\angle 6$
$m\angle 7$	38°	vertical $\angle 4$
